## BOOMERANG CUSTOMER PAGING SYSTEM

Designed with 4 pins for increased stability on the charging base and bright white LED lights when the alert is triggered the Adver-Coaster offers features far beyond the traditional coaster pager. Over The Air (OTA) commands will allow customers to select alert time and volume and the out of range mode will alert patrons should they travel too far from the transmitter. These along with a host of other features make the Adver-Coaster the pager you should choose when you are looking for a coast style pager.

### FEATURES

- Small charging base for those locations where size matters.
- 4 pins for increased stability on the charging base.
- Easy to change advertising space
- Over The Air (OTA) commands allows you to select alert time and volume and the out of range mode.

### OPTIONAL PERSONALIZED VOICE MESSAGING ALERTS:

With the Boomerang Adver-Coaster Pager, your customers no longer have to hear just a beep. Now they can have a voice message, such as "Thanks for choosing our Bistro, your food order is now ready". The Voice Pager also notifies customers with a beep, flash or vibration.

### WIDE FREQUENCY BAND:

Boomerang pagers are programmable between 450-470Mhz, making them perfect for a reseller with dealers in many regions. Why carry 4 models of the same pager when one pager is all you need?
